

MOOSE JAW

FOUNDED ON **STRENGTH**. GUIDED BY **VISION**.

THE TOMLINSON PROMISE

TOMLINSON has earned a reputation for excellence, integrity, innovation and teamwork. When you work with our team, you can be assured that you are getting the best people for the job. Every one of our employees is committed to realizing our corporate values.

OUR STANDARDS

An unwavering work ethic, unparalleled customer service and uncompromising approach to safety and the environment have helped us raise the bar for our industry. We uphold our family values by adhering to these standards.

OUR COMMITMENT

On every job, we demand the highest quality standards in all our products and services. We provide the safest work environment possible for our employees, our customers and our community. Our business is conducted ethically and professionally to inspire pride in our employees, our work and our company.

OUR VISION

To be the strongest transportation infrastructure team in eastern Canada.

YOUR BEST CHOICE...

ONE FIRM IS ALL YOU NEED.
TOMLINSON TAKES CARE OF
ALL THE DETAILS.

Providing a comprehensive range of products and services is how we deliver value for our customers in the increasingly technical infrastructure industry. Our investment in our people, processes, resources and equipment allows us to provide aggregates, concrete and asphalt that exceed industry standards. We are proud to have obtained International Organization of Standardization (ISO) certification for the supply of concrete, asphalt, aggregates and civil infrastructure construction.

... EVERY STEP OF THE WAY

By focusing on creativity and innovation, **TOMLINSON** finds solutions where others see barriers. We inspire trust by providing services for: Heavy Construction, Custom Mining, Sewer and Waste Water and Environmental Services.

OUR CAPABILITIES INCLUDE:

- Management and construction of civil infrastructure projects
- Complete site development from excavation to asphalt
- LEED certified material management
- Solutions for infrastructure construction and rehabilitation, storm, sanitary water servicing, road and bridge construction, environmental servicing, waste management, remediation and demolition
- Compliance with government standards and commitment to maximize environmentally responsible diversion goals

GETTING IT RIGHT...

The heavy construction industry relies on the production of quality aggregates for its success. **TOMLINSON** quarries produce the critical foundation for roadway infrastructure, buildings and other structures. With careful consideration of physical, chemical, mechanical and mineralogical properties, we ensure the right composition for strength and durability in all concrete and asphalt applications.

...FROM THE GROUND UP

Our diverse mining sources give us a unique competitive advantage.

Ontario Trap Rock is a specialty aggregate quarry on a 1,000 acre site on the shores of Lake Huron. The aggregate deposit known as “Diabase” or “trap rock” is a very hard durable material and valuable in a variety of forms; it is commonly used in rail ballast, rock wool insulation, high quality asphalt, concrete and industrial mineral applications. Our state-of-the-art crushing equipment allows us to produce a high quality cubical material, which we ship throughout Canada and the United States.

Since the ship first loaded in 1995, our reputation for exceptional quality product has steadily grown.

THE PERFECT MIX

ROADS. RESOURCES. REPUTATION.

TOMLINSON is a leader in the road building industry. Using premium aggregates from our own quarries is a business advantage enjoyed by our customers and respected by our peers.

Our skilled people, provincially certified material-testing laboratories, quality control procedures and efficient asphalt and concrete plants – combined with decades of experience – have earned us a reputation for continually improving. From parking lots to high-volume highways, TOMLINSON uses self-sourced aggregates to produce more than 50 different asphalt mixes.

Many developments require the ability to produce construction materials in hard to reach or high volume applications. Our resources include high capacity portable crushing, hot mix asphalt production and wet or dry batch ready-mix productions. The Heavy Civil and Structures Division also uses a portable asphalt plant and ready-mix concrete plant to provide custom solutions in diverse locations.

SOLID RESULTS

A commitment to environmental awareness and sustainability is sweeping the construction industry, and TOMLINSON Ready Mix has responded with concrete mixes that conform to “green” building practices. Our internal quality control procedures are ISO 9001 Certified, while our Stittsville and Alfred Plants are now Eco-Certified by the Ready Mixed Concrete Association of Ontario (RMCAO).

TOMLINSON Ready Mix serves all of Eastern Ontario with our fixed plants and is expanding further with our portable plant. Our vision is to be the leading supplier of ready-mix concrete, creating value for our customers, our employees and the communities where we work.

THINKING BIG

TOMLINSON's Heavy Civil and Structures Division has evolved into a competitive leader in the industry. Predominantly focused on the construction of complex infrastructure projects for federal, provincial and municipal authorities, our diversified group of professional engineers, technologists, technicians and skilled tradespeople demonstrates their capabilities in all components of a project.

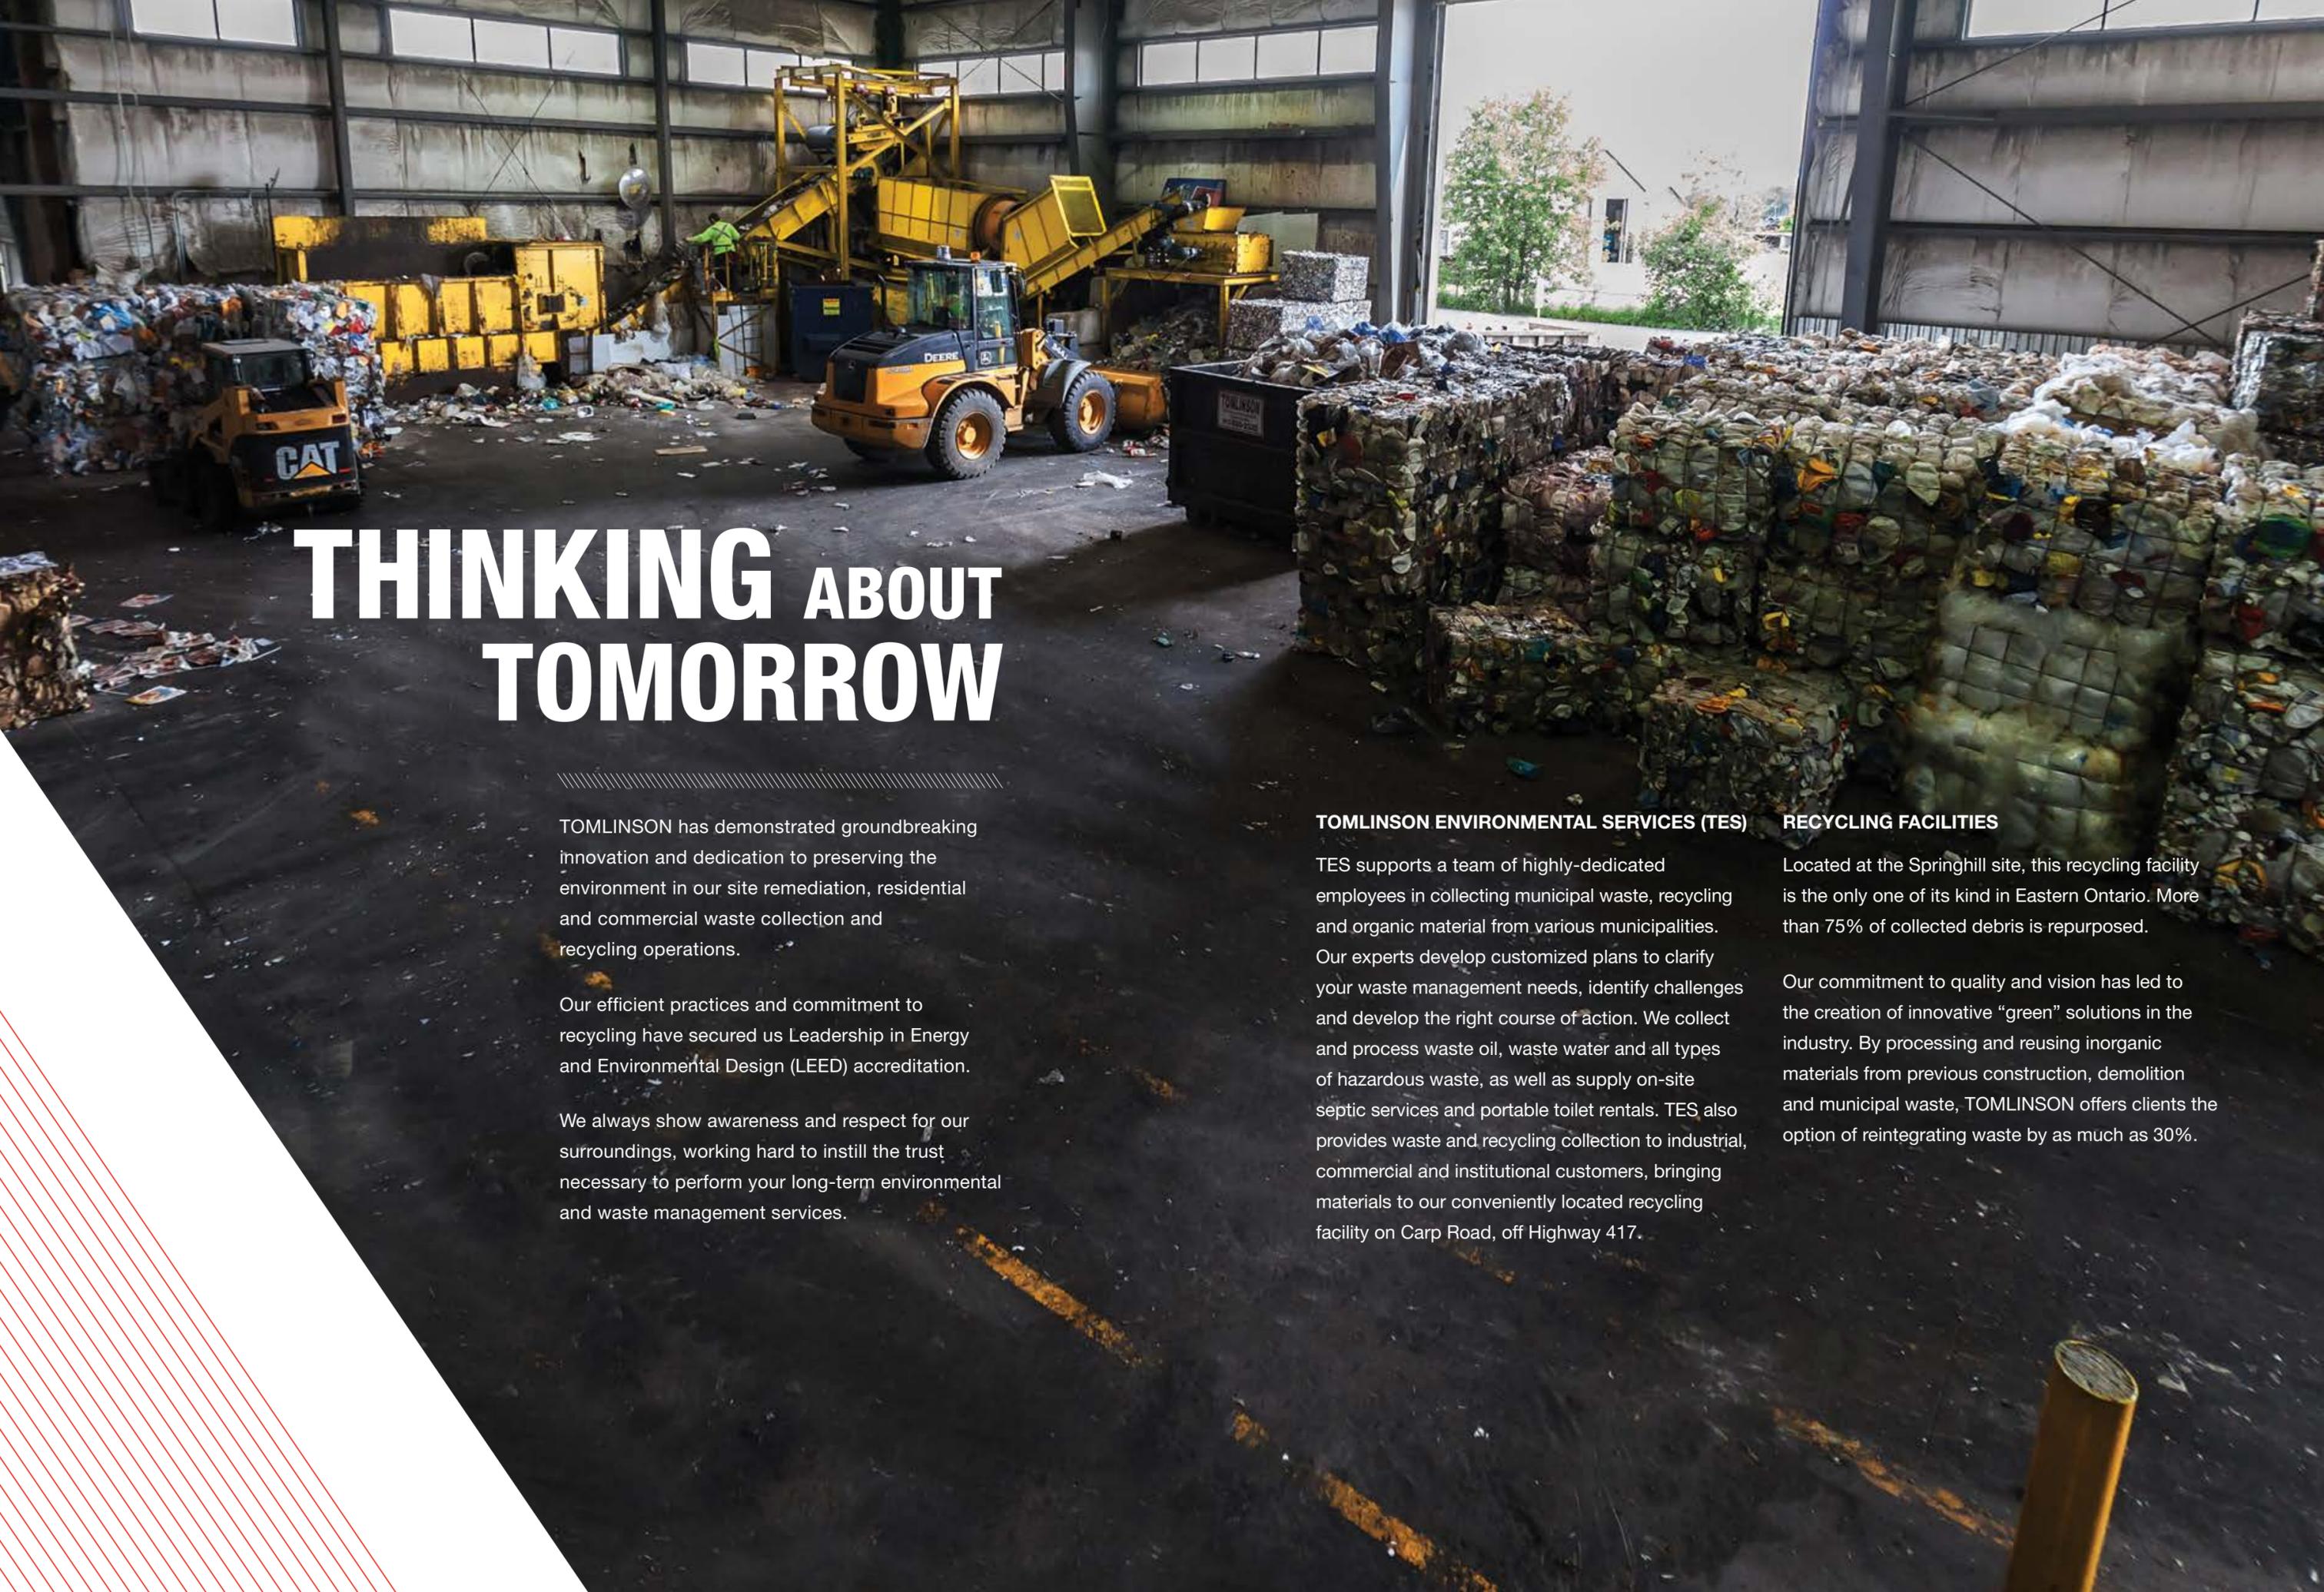

Our commitment to excellence in expertise and technology has earned TOMLINSON numerous "Provincial Paving" awards for the highest quality asphalt on Ontario roads. The Structures Division has also been recognized on separate occasions with awards from the Portland Cement Association and the American Public Works Association.

THINKING ABOUT COMMUNITIES

Our experience and expertise have provided the means to meet increasing demands for a sustainable transportation infrastructure system in municipalities. This work involves all facets of road construction, excavation, underground sewer and water, electrical, traffic, granular, asphalt, concrete, bridge structures and landscaping. With experience in operations ranging in size from intersection improvements to major infrastructure construction, our team of professionals is prepared to meet the unique challenges of each project.

Commercial and subdivision developers continue to choose **TOMLINSON** for service and quality. Our commitment to identify our clients' needs and to provide individual solutions has resulted in continual growth of this division. We offer complete site services, excavations, site grading, granular placement, traffic plant, asphalt paving, concrete works, building excavation and urban and rural subdivision development.

THINKING ABOUT TOMORROW

TOMLINSON has demonstrated groundbreaking innovation and dedication to preserving the environment in our site remediation, residential and commercial waste collection and recycling operations.

Our efficient practices and commitment to recycling have secured us Leadership in Energy and Environmental Design (LEED) accreditation.

We always show awareness and respect for our surroundings, working hard to instill the trust necessary to perform your long-term environmental and waste management services.

TOMLINSON ENVIRONMENTAL SERVICES (TES)

TES supports a team of highly-dedicated employees in collecting municipal waste, recycling and organic material from various municipalities. Our experts develop customized plans to clarify your waste management needs, identify challenges and develop the right course of action. We collect and process waste oil, waste water and all types of hazardous waste, as well as supply on-site septic services and portable toilet rentals. TES also provides waste and recycling collection to industrial, commercial and institutional customers, bringing materials to our conveniently located recycling facility on Carp Road, off Highway 417.

RECYCLING FACILITIES

Located at the Springhill site, this recycling facility is the only one of its kind in Eastern Ontario. More than 75% of collected debris is repurposed.

Our commitment to quality and vision has led to the creation of innovative “green” solutions in the industry. By processing and reusing inorganic materials from previous construction, demolition and municipal waste, TOMLINSON offers clients the option of reintegrating waste by as much as 30%.

TAKING THE NEXT STEP

ORGANIC MATERIALS RECOVERY

Lystek's Organic Materials Recovery Centre in Dundalk, Ontario, is the first development of its kind in North America. This state-of-the-art facility processes biosolids and other non-hazardous, organic feedstock into a CFIA registered, pathogen-free, liquid fertilizer. **TOMLINSON** is using this environmentally friendly business line to expand into the solid waste management industry across North America.

Lystek's award-winning process takes biosolids and other organic fractions from waste-water treatment plants and converts them into a beneficial fertilizer product for land application. This patented system will also reduce the overall volume of output and create bio-gas for green energy. By diverting materials from landfills, Lystek offers generators a cost effective, responsible and sustainable solution over the long term. There are over 17,000 waste-water treatment plants across North America, all of which are candidates for this technology. In fact, the market for Lystek's solutions is virtually unlimited.

SUSTAINING SUCCESS

Ralph Tomlinson founded R.W. TOMLINSON Cartage in 1952 with one single-axle dump truck. Incorporated as R.W. TOMLINSON Limited in 1969, the company is now a prominent player in the sand and aggregate, concrete and asphalt supply, construction, trucking and environmental industries.

Today, we're proud of the fact that we attract the best people in the business: forward-looking individuals who share our dedication to quality and innovation. Our investment in motivated employees looking to maximize their potential has paid off. Together, we have secured our position as a competitive leader in the industry. Our progressive organization offers knowledge, skills, advancement and a safe work environment to candidates sharing our vision.

With more projects planned in Quebec and the United States, TOMLINSON'S reputation for superior quality, already well-established in Ontario, will soon be recognized far and wide.
